

Flutter App Assignment - README

Student Information

Name: Arus Thienmee

Student ID: 6588108

Section: 3

Pages Implemented

1. Page Name: home

Description: the home page that actually display a the weather report for easy view and some pop up news according to the application feature to 'report diseases'

2. Page Name: report

Description: to enter informations for reporting diseases in the local area

Features and Widgets Used

List important widgets, layout elements, and any Material Design components you used.

Features:

AppBar, ElevatedButton, TextFormField, NavigationBar, Icon, Card, ListTile, go_router
, GlobalKey, Image.network

Widgets: Column, Row, Container, Padding, SizedBox, Expanded, StatelessWidget,
StatefulWidget

Known Issues or Limitations

- The app is barely usable due to no backend, and every data is mock-up
- The form submit is not implemented
- The image from image.network is known for it slowness and can't work without internet

Briefly describe any parts of the app that aren't working as expected or things you couldn't finish.

- Form submit, and API things required more time to work on
- Some button in home page could be stateful

Reflection

1. What did you find most challenging about this project?
 - a. I literally fly to Japan the day after Final exam, and start internship instantly, so the hardest part is **time management**. Now that I'm typing this is literally 20 minutes before the deadline and it almost 7 pm here.
2. Which widgets or design elements are you most proud of using?
 - a. The Newstile with image.network because newstile looks so lazy-good and
3. What would you add or improve with more time?
 - a. I will add a clickable bookmark icon at the newstile
